

Lean & Clean Supply Management

KANBAN SYSTEMS

Supply Management

LEAN & CLEAN Supply Management

Dramatically increasing healthcare costs require eliminating waste from the hospital's supply chain. Lean inventory management is an effective approach to controlling these costs. LogiQuip's storage solution products and services enable the cost effective implementation of Lean tools such as Kanban Systems, 5-S programs, Visual Management and Value Stream Mapping. Plus, our unique storage solutions eliminate space waste in PAR locations throughout the hospital.

Storage Space Waste

A frequently overlooked element of hospital waste – space waste – is eliminated throughout all PAR locations. LogiQuip's unique storage products combined with expert onsite analysis and CAD design services can nearly double storage capacity or significantly reduce the storage footprint for similar inventory items. The results are effectively maximized space and inventory.

Kanban Systems

Implementing Lean inventory pull management with Kanban triggers can solve many common supply problems: hoarding, stock outs, product expiration, emergency orders, too frequent replenishment, excessive PAR levels, unorganized supply storage and clinician supply chain involvement. LogiQuip has developed accessories for our product lines that are tailored to Kanban applications.

5S Programs

Sort – Set – Shine – Standardize – Sustain has never been done better. LogiQuip's storage products enable immediate, effective implementation of 5S programs for inventory storage locations hospital wide.

Visual Management

Inventory items are readily identified and accessed through superior organization and visualization. Color codes, labels, bar coding and alpha numeric labels can be used in a wide variety of ways specifically suited for the inventory item and data collection system.

Value Stream Mapping

LogiQuip's CAD design process assists with the visualization of current and future ideal states of PAR locations throughout the hospital. Analysis of people and product flow within these PAR areas is effectively accomplished.

Lean and Clean Inventory Storage

Plastic storage bins are widely used but are known to accumulate dirt, dust and debris. LogiQuip wire mesh baskets, ParWall® and ParStor® systems eliminate dirt and debris entrapment along with labor intensive plastic bin cleaning and handling.

Supply Management Systems

ParWall® Kanban System

PW367 shown w/ additional lane dividers

Flipper ParWall® System

- Kanban flipper signal. Patent pending.
- High visibility lanes front to back.
- Flipper system compatible with all label signals.

ParWall® w/ Wire Divider Kanban

- Wire Kanban dividers in 6 sizes to create large to small panels.
- Full visibility through open wire design.
- Self-cleaning, chrome wire.

ParWall® Two Bin Kanban Systems

- Higher capacity than wire shelves with bins.
- More sku's with higher pars.
- No lost space on shelf with wire divider system.
- Total visibility of inventory.
- Full width basket shelves 36" or 48".
- Full depth basket shelves of 12" or 18".
- Fine mesh or large mesh chrome baskets.
- Self-cleaning, open wire design.
